

GLASS

Glass è una gamma di pannelli e laminati rivestiti con lastre di PMMA metacrilato in spessore 4 mm di diversi colori.

I supporti su cui viene applicato il metacrilato sono:

- truciolare melaminico bianco spessore 8, 19, 25 mm per antine o pannellature
- compact HPL bianco cuore nero 8 mm per tavolini o mensole con la costa a vista
- laminato HPL 0,8 mm retro smerigliato per poterlo incollare, a freddo, su qualsiasi tipo di supporto.

Gli spessori finali saranno 4 mm in più dello spessore dei supporti utilizzati.

Il formato dei pannelli è 3050x1500 mm.

La bordatura dei pannelli si può fare con un bordo a scelta fresando a 45° in modo da scoprire lo spessore del metacrilato.

Il metacrilato ha dilatazioni termiche superiori ai pannelli base legno, quindi i pannelli di GLASS devono essere condizionati a temperatura ambiente prima di essere lavorati e bordati.

GLASS

GLASS is a range of panels and laminates surfaced with 4 mm thick PMMA methacrylate sheets in various colors.

The methacrylate is bonded on various cores:

- *white melamine faced chipboard thickness 8, 19, 25 mm for cabinet doors or wall claddings*
- *white compact HPL black core 8 mm for tables and shelves with the edge at sight*
- *HPL 0,8 mm sanded back to be bonded, with cold pressing, to any substrate.*

The final board thickness will be 4 mm more than the thickness of the core.

The size of the panels is 3050x1500 mm.

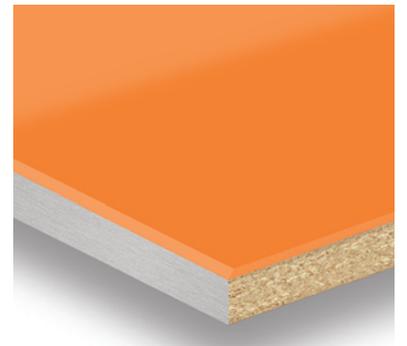

The panels can be edged with any edge with a 45° machining, to reveal the methacrylate thickness.

The methacrylate has higher thermal dilatations compared to wood base panels, for this reason the GLASS panels must be conditioned at room temperature before being processed.
