

MATRIX

MATRIX è una gamma di pannelli con cuore di metacrilato rivestiti con KUIK o HPL e in seguito incisi. La SM'art offre un enorme numero di combinazioni, ben oltre 10.000, con un minimo di ordine di un pannello singolo, lavorando con materiali tutti disponibili a magazzino e quindi con tempi di consegna rapidissimi.

Si possono abbinare 11 colori di metacrilato con moltissimi tipi di rivestimenti, e diversi disegni di incisione, dando origine ad un prodotto altamente versatile e personalizzabile.

Alcuni metacrilati sono di colore pieno, e quindi non trasparenti, e con le incisioni si ottengono pannelli di MATRIX con effetti grafici e cromatici entusiasmanti.

Con i metacrilati trasparenti invece si producono dei pannelli di MATRIX che mostrano una trasparenza in corrispondenza delle fessate, che quindi si apprezzano al meglio se retro illuminati.

I rivestimenti si possono selezionare tra tutti i KUIK Metal ed i KUIK Acrylic, oltre che tra molti dei laminati stoccati dalla SM'art.

Presentiamo qui alcuni esempi di combinazione, ma potete sbizzarrirvi creando il vostro abbinamento preferito su www.s-m-art.it/configuratore/matrix.html

Inoltre la SM'art può anche fornire il pannello rivestito senza incisioni in modo che il cliente lo possa poi pantografare a suo piacimento.

Infine, se avete qualche idea su incisioni speciali, potete disegnarle su Autocad ed inviarci il file, e noi, previo controllo fattibilità tecnica, realizzeremo i vostri pannelli di MATRIX assolutamente esclusivi.

I pannelli di MATRIX sono in formato 3030x1220 mm. Lo spessore finale è il risultato della somma dello spessore del metacrilato, cioè 4 mm, e dello spessore del rivestimento selezionato.

MATRIX

MATRIX is a range of panels with a methacrylate core surfaced with KUIK or HPL before engraving them.

SM'art offers a huge number of combinations, well over 10.000, with a minimum order of one single panel, working only with ex-stock materials, thus with very quick delivery time.

You can mix 11 methacrylate colors with many kind of surfacing materials, and few different engraving designs, obtaining a very flexible and highly personalized product.

Some methacrylate items are colored in the mass, thus non transparent, and you can get MATRIX panels with astonishing graphic and chromatic effects. With the transparent methacrylate cores you get MATRIX panels which show a translucency in the machined areas, and they produce the best result when backlit.

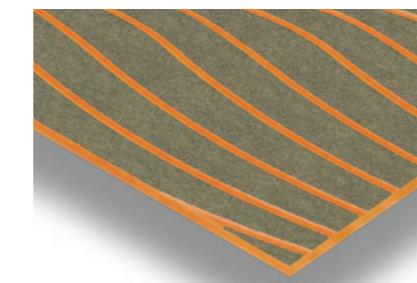

The surfacing materials can be selected among the KUIK Metal and KUIK Acrylic ranges, and among all the HPL laminates in stock in SM'art.

We present here some combination examples, but you can play and create your favorite MATRIX on www.s-m-art.it/configuratore/matrix.html

SM'art can also supply the surfaced methacrylate board without engraving, so that the customer can machine it as he prefers.

Moreover, if you have some ideas on special engravings, you can draw them on Autocad and send us the file, and, after checking the technical feasibility, we'll produce you absolutely exclusive MATRIX panels.

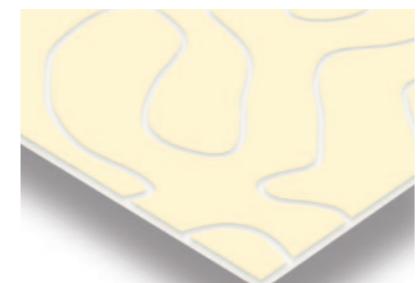

The MATRIX panels are in size 3030x1220 mm. The final thickness is the result of the sum of the methacrylate thickness, that is 4 mm, and the selected surfacing material thickness.
